

AD Admin Tool

Browse, Edit, Query and Export from Active Directory™

AD Admin Tool is a simple and easy to use tool which allows you to browse, edit, query and export from active directory. With this tool you can view and edit active directory data including binary and images, export and import data to/from most popular file formats, edit attributes using many built-in editors, manage active directory users and their privileges, mass update entries using SQL-like syntax and use a multitude of other admin functions designed for making your work with active directory comfortable and efficient. Some core features of AD Admin Tool are listed below

1. Both LDAP and AD View of the Active Directory
2. Connect to Active Directory Locally, Remotely or Using SSL
3. Windows Explorer like Interface, very easy to use
4. Active Directory Bulk Export (Excel, CSV & LDIF)
5. Visual LDAP Filter Builder
6. Query Active Directory with SQL Like Syntax
7. Build LDAP Filter with SQL Select Statement
8. Create, Edit or Reset Password
9. Simple One Attribute Search from the Tool Bar
10. Update Attributes Using SQL Update Statements
11. Powerful Attribute Editors (Password, Image, Hex, AD & Generalized Time ..)
12. Drag and Drop
13. Built in Templates to Create Entries, Create an Entry from an Existing Entry
14. Access Multiple Directories
15. Browse Large Directories
16. View all Available Attributes
17. Customization According to Your Needs
18. Easy SSL
19. Easy Active Directory User & Group Management
20. View and Connect to Other Domain Controllers

Features:

Easy Active Directory Management: With AD Admin Tool you can quickly and easily create and edit entries. LDAP connection profiles give you the opportunity to connect to the active directory server in one touch and only work with the selected active directory connection. With this tool you can connect to the active directory locally, remotely or using SSL.

Connect to Active Directory Remotely.. : With AD Admin Tool you can connect to active directory locally, remotely or using SSL. If the machine you are connected from is connected to the domain, it will prompt you to enter a password and will create a connection for you. If you want to connect to active directory remotely or using SSL you can easily create a new connection using the new connection wizard.

Active Directory User Management: AD Admin Tool makes it simple to manage your active directory users through its easy-to-use-interface. User management in AD Admin Tool helps you to create and modify users, configure their general

attributes, configure their group memberships, lock and unlock their accounts, expire their passwords, reset their passwords and other important tasks.

Active Directory Domain Management: With this active directory tool you can easily set your active directory domain properties - just right click the domain and change the properties you want to change. The domain properties window will let you configure domain password policies, lockout policies, password complexity rules, password length and other settings.

Active Directory Group Management: AD Admin Tool simplifies active directory group management. It provides a tool to easily create different types of groups and assign members to them. You can assign members to group or groups to members.

Drag and Drop: AD Admin Tool provides you with the ability to copy or move objects across containers by dragging and dropping the entries or containers, use Windows clipboard to copy a set of objects, DN, LDIF and others. You can perform operations with a group of objects or with a single object.

When you select an entry, all cut, copy, paste, rename and delete operations occur relative to this selected entry.

View All Available Attributes: With AD Admin Tool you can view all available attributes. It not only displays attributes with values but also attributes without values. You can also add more values to the existing attributes by simply right clicking and selecting "Add another value".

Powerful Search: AD Admin Tool provides a powerful search tool which allows you either to create the search filter text directly or to build the filter visually by selecting the attributes.

Query Active Directory like Database: AD Admin Tool allows you to search Active Directory using SQL like syntax. It provides two powerful tools which allow you either to edit query text directly with syntax highlighting or to build a query visually with a drag and drop of keywords and attributes.

Bulk User Management: Using this active directory tool, you can mass-modify user attributes using SQL-like syntax. For example, to assign a manager to all users in a Chicago container you write a SQL statement as:

```
Update CN=Chicago,DC=LDAPsoft,DC=local Set manager='CN=jdoe,CN=Users, DC=LDAPsoft, DC=local' where  
objectclass='user' subtreescope
```

Please use UpdateReplace to update attributes with multiple values.

Powerful Attribute Editors: AD Admin Tool wizards and editors allow you to create, edit and delete attributes of your choosing. The Tool provides a set of powerful editors to edit the binary, Hex, File, image, object class, DN, Generalized Time, Boolean and Integer fields.

LDAP Password Editor: AD Admin Tool's password editor allows you to enter password in plain text as well as various hash methods: SHA, SSHA, MD5, SMD5 and CRYPT methods are supported.

Image Editor: With AD Admin Tool Image editor you can add or update jpeg photo images. Our image editor automatically converts different photo formats to jpeg and adds or updates the existing images.
